TFL 507

더블 립 씰

These seals provide low friction, effective sealing against many contaminants, and accommodate axial displacement of the shaft. In highly contaminated environments, they can serve as the first barrier in a three-barrier sealing solution. The combination of housing seals, the grease fill in the housing, and a bearing with integral seals can have a significant impact on bearing service life.

- Good protection against contamination
- Keep the lubricant in the housing
- Part of the three barrier solution
- Low friction

개요

치수

축 직경	30 mm
하우징 홈 직경	43 mm
너비	4.5 mm

속성

액세서리 유형	하우징 씰
씰링 유형	더블 립
재료	니트릴 고무

물류

제품 순 중량	0.003 kg
eClass 코드	23-05-17-90
UNSPSC 코드	31171519
